10 GitHub repos that cut your Claude Code token usage by 60–90%

This will help you when creating your own trading bots and tools for Polymarket, as well as for any other tasks

Here's the full list

1. RTK (Rust Token Killer)

CLI proxy that filters terminal output before it hits your context window. 60–90% reduction on common dev commands. One binary, zero dependencies. Works with Claude Code, Cursor, Copilot.

GitHub: [http:// github.com/rtk-ai/rtk](http://github.com/rtk-ai/rtk)

2. Token Savior

MCP server that navigates code by symbols, not full files. 97% reduction on code navigation. Persistent memory across sessions. 69 tools, zero external dependencies.

GitHub: [http:// github.com/Mibayy/token-savior ...](http://github.com/Mibayy/token-savior)

3. Context Mode

Sandboxes raw tool output into SQLite instead of dumping it straight into context. 98% context reduction on Playwright, GitHub, logs. Only clean summaries enter your conversation. Works as a Claude Code plugin.

GitHub: [http:// github.com/mksglu/context-mode ...](http://github.com/mksglu/context-mode)

4. code-review-graph

Local knowledge graph that maps your codebase with Tree-sitter. Claude reads only what matters - not the entire repo. 49x token reduction on large monorepos. 6.8x on average reviews.

GitHub: [http:// github.com/tirth8205/code-review-graph ...](http://github.com/tirth8205/code-review-graph)

5. Caveman Claude

Makes Claude respond like a caveman to cut output tokens. 65–75% output reduction. One-line install. Full technical accuracy stays intact.

GitHub: [http:// github.com/JuliusBrussee/caveman ...](http://github.com/JuliusBrussee/caveman)

6. token-optimizer-mcp

MCP server with caching, compression, and smart tool intelligence. 95%+ token reduction

through intelligent caching. Compresses repeated tool outputs automatically.

GitHub: [http:// github.com/ooples/token-optimizer-mcp ...](http://github.com/ooples/token-optimizer-mcp)

7. claude-token-efficient

One CLAUDE.md file that keeps responses terse. Drop-in, no code changes needed. Reduces output verbosity on heavy workflows. Best for output-heavy sessions.

GitHub: [http:// github.com/drona23/claude-token-efficient ...](http://github.com/drona23/claude-token-efficient)

8. claude-context (by Zilliz)

Code search MCP that makes your entire codebase the context. ~40% reduction with equivalent retrieval quality. Hybrid BM25 + dense vector search.

GitHub: [http:// github.com/zilliztech/claude-context ...](http://github.com/zilliztech/claude-context)

9. claude-token-optimizer

Reusable setup prompts for optimizing any project. 90% token savings in 5 minutes. Reduces doc token usage from 11K to 1.3K.

GitHub: [http:// github.com/nadimtuhi/claude-token-optimizer ...](http://github.com/nadimtuhi/claude-token-optimizer)

10. token-optimizer

Finds ghost tokens that silently eat your context. Survives compaction without losing quality. Fixes context quality decay over long sessions.

GitHub: [http:// github.com/alexgreensh/token-optimizer ...](http://github.com/alexgreensh/token-optimizer)

You don't need all 10. Pick 2–3 based on your workflow:

Heavy terminal output? → RTK Big codebase? → code-review-graph + Token Savior Lots of MCP servers? → Context Mode Quick fix? → Caveman + claude-token-efficient

Most people are burning tokens without knowing it.

Run /context in a fresh session and see how much is already gone before you type a single word.

Awesome Prediction Market Tools

awesome

The most complete, community-maintained directory of prediction market tools — analytics platforms, trading bots, dashboards, APIs, data feeds, alert systems, educational resources, and more.

Covering Polymarket, Kalshi, Manifold, Hyperliquid, and the wider forecasting ecosystem.

Pull requests welcome — add your tool or improve the list!

README

Analytics Tools

- [Polymarket Analytics](#) — Global analytics platform providing comprehensive data on Polymarket traders, markets, positions, and trades.
- [Polyights](#) — AI-powered Polymarket analytics with 30+ custom metrics, news insights, alerts, and AI-driven summaries.
- [Hashdive](#) — A platform designed to provide advanced Polymarket and Kalshi analytics, with a special focus on Smart Scores.
- [Betmoar](#) — Web-based Polymarket trading terminal offering powerful search, real-time news, and unique market insights.
- [Parsec](#) — Parsec provides real-time data analytics and insights for Polymarkets, helping users make informed decisions.
- [MobyScreener](#) — Live feed tracking top Polymarket traders' buys and sells in real time for actionable prediction market insights.
- [PolyScope](#) — Free real-time monitoring suite for Polymarket tracking trending markets, odds changes, and smart trader activity.
- [Monitor the Situation](#) — Institutional-grade dashboard for live orderbooks and cross-market price comparison on Polymarket, Kalshi, and Limitless.
- [PredictFolio](#) — Free Polymarket trader analytics platform enabling users to analyze, compare, and track trading performance and statistics.
- [PolymarketDash](#) — Professional trader analytics and real-time monitoring tool for Polymarket, specializing in smart money tracking and in-depth data analysis.
- [Pricediction](#) — AI-powered prediction market toolkit for deep research, automatic analysis, and direct trading on Kalshi and Polymarket.
- [BetterAI](#) — Multi-model AI-driven prediction platform delivering real-time, explainable insights for Polymarket and Kalshi.
- [Polyimprlr](#) — A user-friendly Polymarket interface with AI-powered chat and analysis—making prediction markets more accessible for all.
