This trader loses more trades than he wins - and still hasn't had a red month all year

His biggest edge isn't being right. It's surviving being wrong

46.2% weather win rate. +\$13,622 since March. \$1.93M volume

Profile: <https://polymarket.com/@0x686880eea810fa9141be46a1acec9eee41755198-1770878625325?via=pavlo-ys0z> ...

Edge → asymmetry, not accuracy - he sprays cheap longshots on Chinese-city temps, eats the small losses, lets the rare hit pay 500%-16,000%

Where the money came from:

\$5 → \$799 - [Chongqing 23°C, May 1] - Yes at 0.6¢ \$26 → \$1,197 - [Shanghai 27°C + , Apr 6] - Yes at 0.9¢ \$33 → \$958 - [Wuhan 23°C, Apr 16] - Yes at 3.2¢

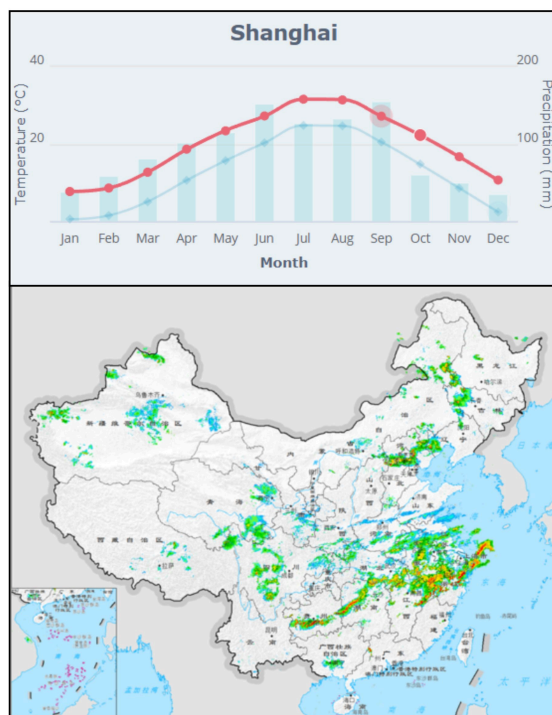

He places dozens of these, most die for pennies, a few detonate

100% green every month since March - on a >50% win rate

Losers capped, winners uncapped - that gap is the entire edge

Everyone optimizes for win rate. He optimized for the size of being right

Which would you rather own - 90% accuracy, or one 16,907% ticket?
