Multi-Model Weighting on Polymarket Weather: How to Properly Weight ECMWF, GEFS and HRRR for Maximum Edge

Most traders take a simple average of all models and think that's good enough

Top accounts weight models differently - depending on city, lead time, and season

This is one of the most underrated ways to improve your probabilities

Why Blind Average Performs Poorly

- ECMWF is often stronger on 48–72h horizon
- HRRR / GEFS shine on short horizons (0–36h)
- The same model can have very different skill in different cities
- Summer and winter biases change

Simple averaging smooths out strengths and amplifies weaknesses

How to Do Weighting Properly

Start simple and scale up:

1. Basic approach (good for starters)

Build a static table: for each city and horizon assign higher weight to the historically strongest model (e.g. HRRR for D + 0 in US cities, ECMWF for D + 2)

2. Better approach (recommended)

Use dynamic weighting based on recent performance - last 30–60 days accuracy per city. The model that performed best lately gets more weight

3. Pro level

Implement stacking or Bayesian weighting - a small meta-model that learns the best combination on the fly

Even moving from equal weights to a simple per-city table already gives a noticeable lift in probability accuracy

Real-World Impact

On narrow 1–2°C buckets, proper weighting can shift a bucket's fair probability by 6–12%

That directly means more +EV trades and higher win-rate. Many consistently profitable bots use weighted ensembles instead of raw averages

If you're still giving equal weight to every model - you're leaving one of the cleanest

repeatable edges on the table

POLYMARKET WEATHER BOT — LIVE SCAN COMPLETE

MARKET SCAN: 20 cities x 3 days = 57 active weather events found
627 total buckets across \$2.5M+ in volume

TOP MARKETS TODAY:

Seoul Apr 17 — \$563K volume (17°C bucket at 91.1% YES)
Shanghai Apr 17 — \$217K volume (20°C bucket at 98.8% YES)
Wellington Apr 17 — \$189K volume
Tokyo Apr 17 — \$125K volume (17°C at 65.5%)

YOUR 6 LIVE POSITIONS:

Seoul 17°C — CRUSHING IT! Entry 19.0% → Now 91.1% (+\$3.60)
Paris 20°C — Entry 19.5% → Now 27.0% (+\$0.39)
Dallas 84–85°F — Entry 34.0% → Now 36.0% (+\$0.11)
London 18°C — Entry 28.0% → Now 27.5% (–\$0.02)
Seattle 52–53°F — Entry 11.0% → Now 8.9% (–\$0.26)
Ankara 19°C — Entry 6.5% → Now 1.7% (–\$0.57)

PORTFOLIO TOTALS:

...

The big winner is Seoul — you bought the 17°C bucket at 19 cents and it's now trading at 91 cents as the forecast locked in. That single position is +\$3.60 on a \$0.95 bet. Paris is also moving your way at 27% (up from 19.5% entry).

The losers are Ankara (forecast drifted away from 19°C, now only 1.7%) and Seattle (52–53°F bucket down to 8.9%).

Note: The tracked bot balance shows –89.8% return because it only
